The different valuation method levels have been defined as follows:

- Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities
- Level 2: Input other than quoted prices included within level 1 that is observable for the asset or liability, either directly (that is, prices) or indirectly (that is, derived from prices)
- Level 3: Input for the asset or liability that is not based on observable market data (that is, unobservable input)

Notes

1. Overall, mortality and morbidity experience for the 12 months were better compared to what was allowed for in the valuation basis.

2. Better than expected termination experience on whole life insurance contracts as well as clients choosing lower fee products.

3. Overall experience was worse than expected due to proportionally higher internal cost allocations to covered segments in line with the new client centric model. This is offset by lower non-covered expenses. Refer to note N for further detail.

4. Various smaller items including credit enhancing activities.

5. The negative variance is a result of disability-in-payment experience.

6. Higher than expected terminations on risk business.

7. Includes a release of discretionary liabilities held in respect of data and systems no longer deemed necessary following completion of investigations.

8. Higher expenses than assumed partly offset by morbidity profits on health businesses.

Notes

1. Refinement of the mortality valuation and reinsurance basis.

2. Strengthening of the persistency assumptions mainly on risk business.

3. Allowance for increased cost allocation to covered business. Refer to note N.

- 4. Allowance for better than assumed mortality on risk business.
- 5. Introduction of the risk product tax fund partially offset by modelling and methodology changes.
- 6. Strengthening of the mortality and morbidity basis.
- 7. Impact of lower than expected sales volumes on expense recoveries.
- 8. Various modelling and methodology changes, including refinements to disability-in-payment, annuity business as well as Guardrisk Life assumptions.

9. Valuation modelling and methodology changes including updating for the expected new taxation basis in Lesotho.

| Investment return on adjusted net worth | 893 | 664 |

I. INVESTMENT VARIANCES

Investment variances represent the impact of higher/lower than assumed investment returns on current and expected future after tax profits from in-force business.

J. ECONOMIC ASSUMPTION CHANGES

The economic assumption changes include the effect of the change in assumed rate of investment return, expense inflation rate and risk discount rate in respect of local and offshore business.

K. EXCHANGE RATE MOVEMENTS

The impact of foreign currency movements on International covered businesses.

L. TRANSFER OF BUSINESS (TO)/FROM NON-COVERED BUSINESS

This transfer represents the alignment of net assets and value of in-force of subsidiaries between covered and non-covered business.

M. CHANGES IN SHARE CAPITAL

Changes in share capital include the recapitalisation of some of the International subsidiaries.

N. HOLDING COMPANY EXPENSES

Certain expenses previously accounted for as recurring shareholder expenses (disclosed as a negative write-up to the directors' value for MMI Holdings) have been charged to expenses within the SA covered business. These two changes mostly offset resulting in a slight increase in Embedded Value. The new expense methodology was not implemented as an opening basis change resulting in the expense variance for covered business being worse than expected and the non-covered experience being better than expected.
